International Imports

for Competitive Shooting Equipment Inc.

Dear Competitor!

Knowing out of 25 years of competitive shooting, **how difficult it is**, most of the time, to secure the proper equipment and all accessories, clothing, top match ammo, etc., and all the "gadgets" that won't improve our score, but we would like to have anyway;

DO YOU ENJOY TARGET SHOOTING FOR RECREATION OR COMPETITION?

We Specialize in Target Shooting Equipment

INTERNATIONAL IMPORTS FOR COMPETITIVE SHOOTING EQUIPMENT INC.

Serving Canadian Competitors since 1958.

Cher concurrent,

Après 25 ans de tir de compétition, je sais **combien il est difficile**, la plupart du temps, de trouver le matériel adéquat et tous les accessoires, vêtements, munitions de première qualité, etc., et tous les "gadgets" qui n'améliorent pas votre résultat, mais que vous tenez à avoir de toutes façons; J'ai donc décidé d'établir à nouveau au Canada un endroit où vos besoins et exigences et le jargon du tireur de compétition seront vraiment compris:

INTERNATIONAL IMPORTS FOR COMPETITIVE SHOOTING EQUIPMENT INC.

Je suis désolé de ne pas parler votre langue et j'accueillerai avec plaisir toutes les demandes en anglais.

1. It is beneficial to You:
To get the best equipment obtainable!
2. It is beneficial to you:
to know, the best Rifles and accessories are readily available!
3. It is beneficial to you:
To be able to rest assured that your investment is backed up by dedicated Service, sound Advice and Experienced people.
4. Competitive Shooting Equipment is our Business, NOT a Sideline!

MAKES CHAMPIONS

The Winning Combination!

MATCH AIR RIFLES

Model 380 .177 Pellet

The 380 Match Model has already achieved: • Silver Medal, 1981 World Championships, Santo Domingo • Gold Medal, Female Juniors, 1982 European Championships, Netherlands • Gold Medal, Men's 1982 International Championships, Innsbruck • Gold Medal, Ladies, 1982 International Match, Zurich • Gold, Silver and Bronze medals, men's and ladies' competitions, 1982 World Championships, Caracas.

Model 380L Left Hand stock also available on special order.

Williams peep receiver sight available separately. Receiver grooved for standard dovetail scope mounts. Anschutz recoil block No. 4805 recommended.

Model 335 .177 Pellet

MODEL 380 The latest state of the art design and engineering matched with precision manufacturing make the model 380 the ultimate in target air rifles as proved by the increasingly rapid growing number of winning medals it is producing. Effortless cocking. Absolutely recoilless and vibration free during firing. Match two-stage trigger can be adjusted from outside. Cheek piece is removable. Intermediate plates may be added to adapt to individual shooter's stature.

Unparalleled accuracy. Certified actual 5-shot test target supplied with each rifle. Dated and signed by shooter giving range and brand of ammunition used. Sight set 6723 included.

MODEL 335 | MAGNUM Now with 20% greater muzzle velocity for increased accuracy. Especially recommended where greater power and distances are required: silhouette shooting, plinking and pest control. The rugged stock is made of selected European hardwood with checkered pistol grip and white line spacers on rubber butt plates. Shoots 4.5 mm (.177 pellets). Two stage trigger can be adjusted for travel and weight of pull. Automatic safety lever prevents barrel snapping and discharging while cocking. Shown with Anschutz front globe and adjustable ramp open rear sights.

MODEL 335 This air rifle is specially designed for 10 meter "Novice Expert" competition shooters where accuracy and good balance is important. Perfect for indoor target shooting at shorter ranges. Shoots 4.5 mm (.177) pellets. Two stage trigger can be externally adjusted for both travel and weight of pull. (Specify Williams peep receiver sights as an accessory when ordering.) Receiver grooved for easy dovetail scope mounting.

Model 1813 holds all individual Olympic and World medals.

Available in a true left hand mirror version—Model 1813L. Each rifle is furnished with a ten shot group test target made with international target grade ammunition.

Sights shown are available separately.

Nine trigger adjustments guarantee the ultimate in accuracy and consistency with 9 points of adjustment.

1. Adjustment screw for first stage.
2. Adjustment screw for sear.
3. Screw for trigger adjustment.
4. Clasp.
5. Backlash adjustment screw.
6. Screw for the weight adjustment of first stage.
7. Screw for the weight adjustment of second stage.
8. Trigger cam adjustment.
9. Adjustment for length of pull. 4

New, improved hook butt plate adjusts universally for more calibrated adjustments.

Axially adjustable base for hook butt plate.

Super Match Model 1813 .22 Long Rifle

The rifle that
won the
U.S. Olympic Gold

MODEL 1813 The rifle of the champions. Acknowledged as the finest match rifle made. It is the supreme example of Anschütz quality.

The 1813 helped more national and international competitors win gold than any other rifle in history. At Titograd, Yugoslavia in 1981 it established 5 new world records. In 1983 at Bucharest it set a new ladies team record. In the 1984 Olympics it brought gold to the U.S.

The Super Match 54 action and 5018 trigger produce the fastest consistent lock time ever designed in a target rifle. This improved Super Match 54 Action has a lighter firing pin with less mass and shorter travel. The carefully machined solid steel bolt, with its dual locking lugs enclosed in the precision made receiver, gives ultra smooth bolt travel and lock up for which Anschütz is famous.

The barrel is micro honed, rifled and lapped to a mirror smooth finish under

the most exacting
manufacturing controls.

The 5018 trigger has nine points of adjustment for complete adaptability in both fit and function to each shooter. Ultra precision honing of the contact points allows micro adjustment settings to assure unmatched consistency from one trigger pull to the next. Manufacturing tolerances are held to ± 5.8 millionths of an inch.

Every detail of the design and manufacturing of this rifle represents **state of the art** technology from Anschütz research, development and close consultation with the world's top competitive shooters. The thumb hole stock, which has become the standard of the world, is made of cured and seasoned European walnut with a special silk-matte type finish. Now a new, improved hook butt plate

Model 1807 ISU Standard Match .22 Long Rifle

1986 MODEL 1807 now fitted with same adjustable hand stop sling swivel shown on 1813 (above).

assembly and 360° adjustable palm rest provide even more adjustments to fit every shooter exactly for every competitive position. Stock is fitted with new contoured adjustable hand stop/sling swivel.

Removable front sight block is drilled and tapped for standard bases. The rifle shown here has the 6720 International Sight Set. This includes a globe front sight and machined micrometer steel rear sight with rubber eye shield and 15 different inserts.

Certified actual 10-shot test target is supplied with each rifle.

MODEL 1807 This rifle, designed for both prone and position shooting has a weight of 10 lbs. This improved high precision 1807 match rifle is the official ISU 3-position world record holder with 592 out of a possible 600 points. Like the Super Match 1813, this rifle features the new Anschütz Super Match 54 action as well as the improved Model 5018 two stage match trigger which adjusts for use as a single stage hair trigger. The check piece is removable and can be fixed both up-down and canted through either wedge or rectangular plates. The butt plate is fully adjustable to fit a shooter's personal specifications. Pistol grip thumb piece and base of fore stock are hand-stipple checkered. Stock is ventilated.

INTERNATIONAL MATCH RIFLES

Models 1810, 1811, 1808ED Super are available in left hand mirror versions

New, improved hook butt plate for Model 1810 adjusts universally for more calibrated adjustments.

MAKES CHAMPIONS

MODEL 1810 A less detailed version of the Super Match 1813 model, this Anschutz match rifle conforms to the same standards of performance and accuracy. It incorporates the all new Super Match 54 action with its incredibly fast lock time—the fastest in the world.

The 1810 stock has a tapered fore-end with a deep receiver area. Hand rest and palm rest are not included. Stock is made of select European hardwood.

Sights shown are available separately.

Model 1810 Super Match II .22 Long Rifle

1986 MODELS 1810, 1811
now fitted with the same
adjustable hand stop
sling swivel as shown
on the Model 1813.

Model 1811 Prone Match .22 Long Rifle

Model 1808ED Super—Running Target .22 Long Rifle

Anschutz greatness
is born of 125 years of
gunmaking experience.

MODEL 1811 Anschutz offers a specialized prone match rifle featuring the incomparable new Super Match 54 action. The stock has a beavertail fore-end, adjustable cheek piece and deep thumb flute. Thumb groove and pistol grip are hand stipple checkered. Stock comes with swivel rail and adjustable hand stop/swivel.

Receiver and barrel accept Anschutz 6720 Sight Set. The barrel is drilled and tapped for scope mount blocks. Butt plate adjusts 4 ways and the hand finished stock is made of select European hardwood.

MODEL 1808ED A precision rifle specially designed for running target competition. Like the 1813, this fine-tuned match rifle features the new Anschutz Super Match 54 action with its unsurpassed 1.7 millisecond lock time.

The stock of the 1808ED Super is designed with heavy beavertail fore-end, adjustable cheek piece and adjustable butt plate with spacers to make this rifle easy to fit individual requirements in order to quickly aim and hold on a moving target.

Equipped with the 5020D single stage trigger, the trigger pull weight is factory set at 1.2 lbs. and is adjustable from 14 oz. to 2.4 lbs.

Certified actual 10-shot test target
as furnished with 1813, 1811,
1810, 1808, 1807, 54MS, 1827B.

Barrel extension for Model
1808ED Super (19¼") and
54 MS-ED (10¾"). Removable
weights are 6 oz. and 1.75 oz.

METALLIC SILHOUETTE RIFLES

Rifle of The Silhouette Champions.

Sights shown are available separately.

Model 54.18MS .22 Long Rifle

54.18MS Metallic Silhouette shooting is the fastest growing shooting sport in America. To meet the demand for this new shooting sport, Anschutz provides the 54.18MS—the finest silhouette rifle available for serious competitors as proven repeatedly at metallic silhouette matches everywhere. This rifle has the famous Super Match 54 action with its extremely fast lock time and has a special Metallic Silhouette stock and two-stage trigger. Barrel length and weight carefully designed for maximum steady-hold advantage. Overall weight is 8 lbs. 6 oz. The entire bolt head is fully enclosed for protection against dirt and abrasives. Advanced design in manufacturing technique allows extremely smooth bolt operation to give the quickest, trouble-free performance possible. Includes (patented) adjustable spring-loaded action tension screws with special

calibrated adjustment key. Receiver is grooved for standard dovetail scope mounts and drilled and tapped for scope blocks. Designed to conform to sanctioned competition rules.

Model 54.18 MS Left

54.18MSL New true left hand version with same specifications as the famous Model 54.18MS but with true left hand stock and left hand operating bolt.

64MS This rifle offers a top grade, medium weight, moderately priced entry into the fascinating sport of metallic silhouette shooting. The stock (similar to 54.18MS) is walnut-finished European hardwood with cheek piece. Entire fore-end base is stippled. Wundhammer swell pistol grip is stipple checkered also and has contoured thumb groove.

The Anschutz two-stage trigger is readily adjustable for weight of pull, take-up and overtravel. The slide safety locks both sear and bolt. Receiver is grooved, drilled and tapped for scope blocks. Scope and mounts are not included.

Barrel is $\frac{7}{16}$ " diameter non-tapered.

*Left hand rifles built to same specifications, except with left hand stock, cast off. Rate of Twist (R.H.) 1 turn in 16½" for .22 L.R.

Dear Biathlete,

- 1) Not every brand of ammunition, respectively every badge of the corresponding sort of ammunition will give satisfactory accuracy at extremely low temperature (-20°C and more). This is due to the different residues of ammunition in the barrel, which affect the precision at very low minus temperatures. At temperatures up to amount -15°C the precision is good. Please watch this very important point when selecting your ammunition.
- 2) Always clean your barrel before and after a competition, since all sorts of residues in the barrel, may affect the accuracy of the rifle at very low temperatures.
- 3) You will always have to protect your rifle, including the inner part of the rifle from moisture, in order to avoid corrosion.
- 4) When the rifle is taken from the cold into a tempered room, you will have to take away the moisture. As soon as the rifle has reached the temperature of the room, you should dry and slightly oil the inner part of the barrel.
- 5) Put away the rifle with opened bolt and opened snow cover, so that possible moisture which might still be in the barrel can evaporate. The parts of the bolt should be slightly oiled inside and outside, i.e. with a special oil which does not change its viscosity at temperatures of -30°C up to $+30^{\circ}\text{C}$, in order to guarantee good ignition. We recommend the Match Winner Oil.
- 6) Before shooting again you will have to wipe dry the barrel in any case. Please watch, that the outer parts of the bolt, loading cutout, etc. are free from oil, grease or residues.

Match Ammunition

22LR

Particularly designed for use in very cold conditions.

Additional weight No. 4749 to be fixed underneath the front sight (200 g). (200 g).

The reserve-box (cartridge holder) No. 4743/1 is a useful accessory for every Biathlon marksman. It contains three spare cartridges for rapid removal at all times and can be attached to the stock or easily be mounted on every spare magazine for Anschütz Biathlon rifles in stead of the detachable magazine floor.

Most frequent defects in .22 weapons, which cause firing defects

Oversize headspace. The cartridge escapes in front of the firing pin with misfire as consequence.

Too much cold firing. The firing pin has created a hole on the breech end of the barrel. The cartridge's rim is pushed by the firing pin with misfire as consequence.

Oversize headspace. The cartridge escapes the firing pin with misfire as consequence.

BARRELS

All Anschütz match rifle stock and systems are interchangeable for shooters who wish to customize their own stock and barreled action combinations. Each is available by special order in either true left hand or right hand configuration. Action screws as illustrated must be specified separately.

Shooting-Jacket
Model
INTERNATIONAL ① 180

A new shooting jacket designed to obtain the scores necessary for today's high standards in three position shooting, especially in standing and kneeling, created in cooperation with top level shooters and coaches all over the world and to the latest regulations of the International Shooting Union.

Front of Jacket ①: Is made of top grade brown velour cowhide with a high round neck five button front. The button holes and pocket edges are reinforced with strong leather. The inner lining is of strong medium grade non slip canvas.

Back of Jacket ②: Is made of heavy grade brown cowhide. Tapered to the waist, with a belt type band above waist. Metal vent holes located across the shoulder and under arms.

182 Shooting jackets, model **SUPER SPORT** and **SPECIAL** are also equipped with this new adjustable leather strips.

The neck line is curved lower for more comfort in the prone position. Back lining is made of extra heavy grade non slip canvas for maximum support.

By means of 2 individually adjustable leather strips at the back of the shoulder, you can eliminate the uncomfortable material bulge in kneeling- and prone-position. This guarantees a free neck and a comfortable and correct position of the rifle at the shoulder ②a.

Sleeves: Set in sleeves, angled cut at elbows. Lined in arm back with light grade canvas and silk inner lining helps to maintain proper blood circulation for longer shooting periods, thus reducing fatigue.

Sleeve Padding: Made out of non-slip special rubber. Special patented sleeve pockets which allow the shooter to choose the right padding to meet his exact individual requirements. Once he has determined the correct amount the pockets are sewed together. Protruding cloth flaps are included in the openings for this purpose. This then makes the jacket fully comply with ISU rules.

An adjustable sling holder with hook is located on the upper arm. **Size:** Available in all women's and men's sizes and also for left hand shooters.

ahg-Kneeling Roll with non slip effect

Article 351
without filler 350

Made of high quality non slip special rubber. Heavily stitched, including a roller located on one end for changes or modifications of the filler. The excelsior and cork filler conforms easily to the shape of the foot and ankle. It compacts to a comfortable, yet firm and steady support. Very

light weight. The easiest way to acquire an excellent and professional kneeling roll. The ahg Kneeling Roll corresponds to the latest regulations of the International Shooting Union and their national federations. Available also without filler.

ahg-Shooting Boots Model SUPER SPORT

Article 130

Were developed for all shooting disciplines according to the latest regulations of the International Shooting Union. Comfortable velour leather with a slightly concave, flat sole, extra long for individual adaption in the prone and kneeling position. The projecting sole can be individually shaped by filing. Footbed with corresponding toerroom guarantees solid standing position and avoids fatigue of the foot during competition. Double lacing without discomforting hooks and eyes at arch and heel of the foot, padded by two broad tongues and padding of the upper part of the boots at the ankles, prevents discomfort but guarantees necessary support of the foot. English sizes: from 4 to 11.

140

140

ahg-Shooting Pants

Article 140

The finest quality shooting pants created in cooperation with top level shooters. Special consideration has been given for maximum performance with regard to the latest regulations of the International Shooting Union.

Material: The pants are made of a durable, fine tissue, non-stretchable, breathable brown canvas. A broad leather waist band also in the back supports the lower back area for the standing and kneeling positions. Large belt loops, a big pocket on the pants and leather support in the seat area are further features of these pants.

Knee area: Padded with ahg-non slip rubber, made as pocket, including a 3 mm strong and firm rubber pad, which is exchangeable in order to achieve individual padding.

Seat area: Light padding under the wide non-slip material guarantees steady kneeling position.

A zipper along the whole leg, which can be opened in kneeling position, avoids bulges of material in the knee joint area.

A full length zipper along the leg, which can be opened in kneeling position and the cut of the pants, proven in competition, guarantee individual, comfortable and firm position during shooting and thus lead to considerable increase in performance.

Size: Available in all women's and men's sizes and also for left hand shooters.

100

ahg Shooting Glove Model FAVORIT

Article 100

FAVORIT is a new design, made of especially softly tanned leather in beige colour, equipped with a velcro tightening strap and with anti-slip padding.

The new ahg Shooting Sling PROFESSIONAL

Article 330

New is the continuous adjustment of the arm loop by special device. This sling will be supplied in addition to the known and approved ahg - shooting slings with slewable metal clips. For right and left hand shooters.

330

120

The new
ahg sling 335

Optimum connection of the sling to the marksman's jacket is ensured by a slewable metal clip on the new ahg sling into which the hook of the ahg marksman's jacket engages (cf. illustrations 13 - 15). In this manner slipping of the sling is prevented. Thanks to the automatic adjustment of the slewable clip the direction of force of the sling is moved outwards from the upper arm and towards the shoulder. This means that blood congestion is prevented in positions, and it guarantees an always constant shooting position.

335

ahg-Summer Glove

Article 120

Made of very fine veloursleather, thick, however, softly padded inside, cotton lining, ventilation holes guarantee sufficient air circulation.

Another advantage of the ahg shooting sling is: angled, adjustable arm loop padded with nep-rubber. Available in white or black for right and left hand shooters.

Available also
in real leather.

JOHANNSEN

Art. 746

W. GEHMANN-foresight hoods for match rifles, large enough to protect the whole foresight incl. an iris-frontsight against dust and damage. Small one for regular axis of sight, big one for high axis of sight. Material leather no. 746,

Nr. 460

W. GEHMANN-shooting gloves for all requirements, entirely made of best leather, comfortable anatomical shape. All models furnished with special rubber for best grip.

Nr. 465

No. 465 2 x 2 finger gloves esp. advantageous when shooting with support band, with each 2 up and down fingers, or when shooting on finger tips, best ventilation.

Nr. 466

No. 466 Summer shooting gloves, new developed model for summer, which has a thick padding, but still a very good air circulation by many extra ventilation holes.

Art. 520 a + b

W. GEHMANN-Iris front sight, Available in two sizes: No. 520 a for 2.5 to 4.3 mm and no. 520 b for 3.7 to 5.5 mm.

Art. 565

W. GEHMANN-Combinationfilter. Iris-diopter, polarization- and 5-colourfilter all in one unit.

Art. 550

Art. 510

W. GEHMANN-Iris-diopter disc
Aperture adjustable from 0,8—2,2 mm (.032—.087").
also for P.H. Sight

W. GEHMANN-polarization filter, combined with Iris-diopter disc (aperture adjustable from 0.8 to 2.2 mm).
also for P.H. Sight

Art. 132 + 134

Entrancehole-gauge with magnifier, allows most correct scoring. Gauge officially accepted by German Shooting Federation. Nr. 132 for cal. .177, nr. 133 for cal. .221r, nr. 133P for cal. .32, .38, .45. Same gauges, but without magnifier are also available in same calibers, see sep. price list nrs. 134—137.

Art. 560

W. GEHMANN-Five colour filter, combined with Iris-diopter disc.

Art. 530

W. GEHMANN-diopter-optic combined with Iris-diopter-disc, a further development of the Iris-diopter-disc, with adjustable aperture, using an optical system with magnification of 1,5 diameters. Continuous focusing, range of 9 diopters. Diopter-disc adjustable from 0,8—2,2 mm (.032 to .087").

Art. 570

W. GEHMANN-diopter-optic combined with 5-colourfilter. A diopter-optic with 1,5 x magnification in connection with the 5-colourfilter

Art. 142

W. GEHMANN-illuminating magnifier, with magnification of 10 diameters, with batteries and optical target scoring for all calibres, including oval bullet holes. The illuminated magnifier is also available without target scoring (no. 730).

Art. 752

Scale for testing exact trigger resistance, with drag-pointer, measuring-range 25-250 p, no. 752.
Scale, but with measuring range 200-2000 p, no. 753.

Kneeling Roll

Art. 490 real leather.

Art. 553

W. GEHMANN-opposite light diaphragm for diopter, combined with polarizationsfilter.
Gives gradual control at the target between 10 and 90% light absorption also elimination of refracted light with the polarising filter. State model of rifle.

NEW

Art. 594

The new W. GEHMANN - diopter has got around the smaller iris-diopter-disc an observation-ring. This observation-ring makes it possible to watch the wind without moving the head and changing the visual - angle. The brightness is from 10-90% lightabsorption infinitely variable.

CHARACTERISTICS OF THE W. GEHMANN - DIOPTER

1. Uninterrupted windcontrol by aiming.
2. Invisible reflection rays of light can be erased by the inside mounted polarisation-disc.
3. Light intensity infinitely variable by 10-90% light absorption.
4. Clear aiming-point through the infinitely variable iris-diopter-disc.
5. Using of a diopter-screen for the not aiming eye possible.
6. The adapting screw (M 18x0,5 mm to M 9,5 x 1 mm) makes using of already used diopter-discs, 5-colour-filters and combination-filters possible.

Art. 525 a + b

W. GEHMANN-Iris-frontsight with crossbar. Ring diameter keeps same width in all positions. Adjustment range 3,0-4,3 mm (art. 525 a).
Adjustment range 4.2-5.5 mm (art. 525 b) state model of rifle.

NEW EQUIPMENT

The 300 meter discipline used to be the highlight of any international shooting event! During the last 20 years it almost faded away. NOT because of lack of interest by the marksman, rather through ever increasing environmental restrictions and the costs involved for 300 meter range space! Now it appears to make a welcome comeback. Mainly because the various armies show an increasing interest in centerfire marksmanship. It will, therefore, have a positive effect on civilian 300 meter competition.

The most interesting version coming from the various manufacturers of 300 meter centerfire rifles is without question the Keppeler Rifle. Here is a specialist that has engineered an action for that purpose only. The best barrel, trigger, sights, stock, etc. does not produce exceptional results if the action is not strong enough and free of stress factors involved! Keppeler engineered such an action! Specializing in the development and manufacture of the 300 meter Free Rifle, he now combined the best of everything already on the market.

The barrel is of high grade $^{42}\text{CrMo}^4$ steel made by Carl Walther. Trigger, sights, stock and hook assembly are Anschütz. Combined with the Keppeler action it turns out to be one of the most outstanding performers in the field! At the European Championships in Zürich and at the German Championships, as well as several "Landesmeisterschaften" (Provincial Championships), the Keppeler Standard Rifle and the 300 meter Free Rifle are making waves in Europe!

The Custom

THE CLASSIC These full-sized authentically classic rifles have the world famous Anschutz Match 54 action with dual locking lugs, recessed bolt face and fully-enclosed bolt head. Anschutz precision manufacturing makes the bolt extremely smooth to operate. The single stage trigger is factory set at a crisp 2.6 pounds and is adjustable for both creep and pull.

The handsome American classic stock style has clean, graceful lines with a deeply fluted comb and fine cut, checkered pistol grip and fore-end. Swivel studs attached. The rich, lustrous stock is made from select European walnut, finished with the exclusive Anschutz silken matte finish which provides both beauty and protection.

The removable straight feed clip magazine holds 5 shots (plus one in the chamber) in .22 L.R. and .22 Hornet. .22 Mag. holds 4 shots. .222 Rem. holds 2 shots plus one in chamber.

The free floating barrel is produced with the same Anschutz precision techniques used for our world championship match rifles. Scope mounts are not included but receiver is drilled and tapped and grooved for standard mounting. Deep blue- ing results from highly polished metal.

Model 1432D Classic and 1532D Classic have a slightly heavier barrel with no sights.

Muzzle diameters and barrel weights vary in Custom and Classic models

THE CUSTOM For distinctive grace and beauty—combined with exceptional accuracy—these rifles are recognized as the finest rim and center-fire sporters available in the world. Exceptional crafting quality. The world-renowned Anschutz precision trigger is factory set at 2.6 pounds and is adjustable for creep and pull. The barrels are rifled and chambered by exclusive Anschutz high-technology methods. Noted for incredible accuracy, these rifles are the perfect choice for varmint and small game hunters.

The fancy grade Monte Carlo stock is constructed from fine European walnut and features a distinctively beautiful hand-carved roll-over cheek piece for additional shooting ease and accuracy.

The beauty of the Wundhammer swell pistol grip is further enhanced by a white lined, rosewood grip cap with a white diamond insert. Both schnabel fore-end and pistol grip are handsomely checkered in the popular skip-line pattern.

The receiver is grooved for scope mounts, drilled and tapped for scope bases. The removable straight feed clip magazine holds 5 shots (plus one in the chamber) in .22 L.R. (10 shot magazine available) and .22 Hornet. .22 Mag. holds 4 shots. .222 Rem. holds 2 shots plus one in chamber.

DELUXE SPORTING RIFLES

MODELS 1416D and 1516D CLASSIC AND CUSTOM These outstanding sporting rifles have fine Anschutz Match 64 actions, similar to the Anschutz Model 1403 target rifle. The barrels are made by skilled Anschutz craftsmen to Anschutz exacting standards and fitted with Lyman folding leaf rear and hooded ramp front sights. The finely machined receivers are grooved for instant scope mounting. Slide safety. Clip magazine. Extra clips available.

THE CLASSIC. A new American classic version of the popular models 1416D and 1516D. Select European walnut stocks have clean sleek lines that make these rifles as much a pleasure to shoot as they are to behold. Cut checkering on grip and fore-end. Swivel studs.

THE CUSTOM. The traditional European versions of these exceptional rifles have European walnut stocks with custom-grade features: Monte Carlo with cheek piece, schnabel fore-end and fine cut checkering.

MODEL 1418D & 1518D This rifle has the same famous action as the popular 1416D & 1516D models shown above. But the distinctive European style Mannlicher walnut stock sets it apart from the rest. It features a genuine buffalo horn schnabel tip and fine skip-line checkering on both fore-end and pistol grip. The Monte Carlo stock also has a comfortable cheek piece especially appealing to shooters who prefer firearms in the finest European tradition. Fine single stage trigger standard. Double set trigger available on special factory order as Model 1418ST. Extra clips available.

MODEL 1433D .22 HORNET A true Mannlicher rifle in the finest European tradition in .22 Hornet caliber with the classical European look. The 1433D has the famous Anschutz Match 54 target action and barrel. 5 shot clip magazine. Extra clips available.

MARK 525 SPORTER This fine automatic rifle replaces the Mark 520 with improvements in action, appearance and performance. Rotary style safety. Folding adjustable rear sight and hooded ramp front sight. Receiver grooved for telescope mounts. Monte Carlo stock and beavertail fore-end of European hardwood are nicely checkered. 10 shot clip magazine. Extra clips available.

What Is The Difference Between A Good Scope And An Excellent Scope?

Experience that works for you

We have been manufacturing telescopic sights for more than twenty years. During this time we have constantly tried to improve develop our instruments, as is once again shown in our program, which is presented in this brochure. The recommendations of experienced rifle makers have guided us in our selection of types and magnifications. That is why we are able to offer you a palette of telescopic sights, which, we are convinced, will meet all the requirements of hunting.

Schockproof and waterproof

Good optics and precision-made individual parts alone do not make a quality telescopic sight. Only careful mounting guarantees that our S. u. B. telescopic sights are absolutely shockproof and that no moisture or dust can penetrate, even under extreme weather conditions.

Controls and guarantee

Strict controls at every stage of manufacture ensure that only impeccable instruments leave our factory. We pass this assurance on to our customers by granting a 30-year guarantee on all instruments.

The reticle is always in the middle

All S. u. B. telescopic sights are equipped with elevation and lateral adjustment controls. Each model designation includes the letter "M". This letter stands for "middle" and points out, that the reticle always remains in the middle of the field of vision. The hunter can therefore take complete advantage of the whole image field at any time.

The easy-to-operate click stop allows a millimeter-precise shot correction. For example, with a 6-power scope one click changes the position of the shot by 8,5 mm at 100 m.

The small reticle control dial allows us to make the movement of the reticle controllable.

S. u. B.- Telescopic Sights

- brilliant, bright image
- shockproof mechanics
- waterproof body
- corrosion-resistant surface
- centered reticle
- controllable movement of the reticle
- easy shot correction with click stops
- rubber edge on the eyepiece
- 30-year guarantee

Brilliant optics, solid mechanics

High-quality raw glass from Schott in Mainz is cut to the highest brilliance in the well-known Wetzlar factories. The reflex-lessening coating, which is steamed onto all lens surfaces, ensures a bright, high contrast image. This coating gives optimal light transmission using the latest technology, and it has passed the German military standard "Mil. Spec. No. C 675". The precision with which the individual parts of our telescopic sights are made is important for their impeccable mechanical functioning.

12x42: The Scope For Target-Silhouette-Varmint Shooting

By popular demand, we offer a scope most suitable for these sports.

Variable Power Scopes

2 1/2 - 10 x 56

1 1/2 - 6 x 42

1 1/4 - 4 x 20

Fixed Power Scopes

8 x 56 L

6 x 42 L

4 x 36 L

1 1/4 x 15 L

Dynamit Nobel

Target

A brand is more than just a name

Many names fail to live up to the claims made about them. But not DYNAMIT NOBEL. Its brands are renowned for standing the test of day-to-day practice. Outstanding products of excellent quality have made DYNAMIT NOBEL an

international name for unparalleled competence. And it is because of this, and this alone, that this versatile company has grown into one of the largest ammunition producers. Throughout the world DYNAMIT NOBEL meets the

toughest standards – for instance, standards uncompromisingly set in the military sector. At the same time, the company has always endeavoured to be the No. 1 choice in competition shooting, offering competitors superior am-

munition for outstanding achievements. There's only one way to stay on target for success – with the internationally registered trade marks of DYNAMIT NOBEL.

RWS is the abbreviation of Rheinisch-Westfälische Sprengstoff-Fabriken which joined DYNAMIT NOBEL in 1931.

ROTTWEIL refers to what was originally a cartridge manufacturing plant in the town of Rottweil in the Black Forest.

GECO is the abbreviation of Genschow & Co., a longstanding manufacturer of pistol and revolver ammunition and a subsidiary of the Company.

Ammunition

The higher the standards in top-level sport, the tougher the competition for sporting honours. That's why shooters need the best equipment available. And why few shooters can do without RWS Rimfire Cartridges. The know-how of highly skilled specialists, the latest technology and experience from a long tradition are all guarantees of the quality of RWS Rimfire Cartridges. Quality that one can tell immediately. From the specific bullet shape; the patented primer, the nickel-plated case, the reliable firing characteristics and the smooth passage through the barrel. Outstanding in every respect. RWS.

SINOXID comes from the Greek language and was registered as a trade mark on the invention by DYNAMIT NOBEL of the first mercury-free primer.

SINTOX is DYNAMIT NOBEL's latest trade mark, for the invention of the first lead- and barium-free primers.

RWS Rimfire Ammunition for Hunting & Competition Shooting

The accuracy of RWS Rimfire Ammunition has been further improved. Ever-increasing demands for higher standards in competitions and the battle for greater recognition in shooting circles has resulted in Dynamit Nobel achieving improved accuracy and technical progress in the manufacture of rimfire cartridges. Accuracy testing for RWS Rimfire ammunition follows specific and defined procedures.

Cartridges taken at random from the production line are subjected to detailed quality control testing and fired from branded weapons to establish accuracy and velocity performances. Accuracy is measured up to a distance of 50 metres. 5 targets each with 10 shots are used and a collective target of 50 shots.

Internationally accepted guide lines state that the pattern for single target shooting should not exceed 16 mm, and 30 mm for the 50 shot collective target. Match ammunition such as the R 50 achieves a collective target pattern of less than 14 mm and correspondingly smaller patterns on single targets. Naturally, Dynamit Nobel's expertise in producing the highest quality Match Rimfire Ammunition is reflected throughout the range.

.22 L.R. Biathlon

A cartridge designed to function consistently at abnormally low temperatures. It has been developed specially for biathlon and similar events.

R 50 10 shots 50 m

.22 R 50

The ultimate match cartridge for serious competition shooters, used by world record holders and Olympic Gold Medallists. There's nothing better at any price.

.22 L.R. Rifle Match

Consistency, precision and an advantageous price are the hallmarks of the .22 L.R. Rifle Match.

Of particular interest is the flat top bullet of 2.5 grams. This particular bullet shape is renowned for its exceptional stability in flight.

In performance rating, it lies between the .22 L.R. Standard and the R 50 and is therefore particularly suited for competition use and also for training use by the discerning shooter.

.22 L.R. Standard

This versatile cartridge is popular throughout the world for training, competition shooting and hunting. Standard .22 ensures accuracy and reliability available to everyone.

.22 L.R. Pistol Match

A new precision product developed especially for practice and competition shooting with pistol and revolver, which features particularly soft recoil.

.22 Short R 25

A special match cartridge for serious competition shooters participating in Rapid-Fire-Pistol events. Minimal recoil is combined with superlative standards of consistency and accuracy.

.22 Short Standard

Short standard suits all short .22 weapons. It is loaded to provide high standards of accuracy for both single shot function and automatics.

Z .22 Long

This cartridge is loaded with a low powder

charge. It is thus especially suitable for indoor shooting but very accurate at ranges up to 25 m.

.22 L.R. Subsonic

Subsonic ammunition has been developed for use in rifles fitted with sound moderators. When used in such rifles, muzzle crack is eliminated, making this ammunition a favourite with the small vermin shooter.

.22 L.R. Shot

Loaded with dust shot these cartridges are ideal for control of small vermin, particularly when working in confined spaces such as barns or domestic gardens. Although most effective in smooth bore weapons these cartridges can be used in a rifled barrel without fear of damage.

.22 Long blank

Blank ammunition for .22 long calibre, loaded with black powder. Suitable for all weapons of this calibre and particularly for starting pistols and signal revolvers.

.22 L.R. HV Solid

This high velocity hunting ammunition provides the vermin or game shooter with a flatter trajectory and higher impact energy than he can obtain from .22 L.R. Highly recommended for game hunters.

.22 L.R. HV Hollow Point

The hollow point version of .22 L.R. HV offers the hunter an even more effective load for vermin and game shooting.

.22 Magnum full jacket

The powerful and fast rimfire ammunition for vermin. Excellent accuracy and particularly effective for use with game. For use in .22 Magnum rifles only.

.22 Magnum soft point

The hollow point increases the stopping power of the bullet. Ideal for vermin. For use in .22 Magnum rifles only.

y = yards

To obtain perfect scores, perfect pellets need the finest weapons and Dynamit Nobel are pleased to recommend weapons by leading German manufacturers for use with RWS Meisterkugeln pellets. Such a combination in the hands of the best marksmen can only result in world record scores. We believe that the RWS Meisterkugeln is the best Match pellet in the world today. It is recognised world-wide as a top quality product from Dynamit Nobel, by marksmen who consistently place their confidence in Meisterkugeln pellets throughout world class competitions.

RWS Air Gun Pellets

Small in size. Big in precision.

It's almost unbelievable just how much brain-power and production know-how DYNAMIT NOBEL invests in its RWS air-rifle and air-pistol pellets. Everything is right, down to the last computer-calculated details. DYNAMIT NOBEL has always devoted a good deal of attention to air gun competition. Over a period of decades it has gathered a wealth of experience on which to base its modern-day innovations. So it's hardly surprising that RWS Air Gun Pellets set technological standards which put them in a class of their own.

FMC = Full Metal Case *not illustrated

Accuracy and reliability are the outstanding characteristics of Geco pistol and revolver cartridges. GECO has an excellent reputation, world-wide, for ammunition in defence, hunting and competition use. Consistency in performance, the controlled ignition of the Sinixid priming compound and the carefully designed range of bullets offer further advantages. Protection against oil penetration is afforded

by a special protective lacquering of the case mouth and primer cap of Geco pistol cartridges. Care in manufacture and constant supervision of production processes guarantee exceedingly high quality. The Geco range of pistol and revolver cartridges meets all present day requirements of police forces and also for hunting and competition shooters. Pistol cartridges have rimless, cylindrical or bottle-neck cases with milled extractor

grooving. A low-porosity nitro-compound powder serves as a propellant. The ogival-jacketed bullets have a distinctive shape which allows the bullet a smooth delivery from the magazine into the chamber of self-loading weapons.

The new Sintox ammunition

In addition to the rest of the Geco pistol- and revolver cartridge range already manufactured with the highly recommended Sinixid.

compound, calibres 9 mm Luger, 38 special and 357 mag. are now also included in the new Sintox range.

The priming compound, being lead — and barium free is particularly suited for use in indoor ranges, and in addition since they are used with fully coated full-jacketed and 3/4-jacketed ammunition, there will be no lead pollution.

The Sintox cartridges are also extremely accurate and reliable.

.32 S & W long wadcutter The target cartridge of the future

The .32 S & W long wadcutter is the cartridge for center fire pistol shooting. They are particularly valued by shooters all over the world because of their minimum recoil and optimum precision.

As a rule, using suitable weapons, at 25 metres a 10-shot group can be achieved of no more than 40 mm diameter. Often,

however, the group is considerably smaller. The 10 on a the target has a diameter of 50 mm. Thus from a technical angle it is possible for the shooter to get a 10 every time. The wadcutter evolved from the Geco 32 S & W long. The special lubricating has further advantages as fewer deposits are left in the barrel.

Geco plastic training ammunition

For training over short distances pistol and revolver cartridges are available with plastic bullets.

Accuracy is ensured at 10 metres. Only very simple and lightly constructed target holders are necessary as the energy of the bullet reduces rapidly.

RWS Centre Fire Rifle Ammunition

For many years Dynamit Nobel has been manufacturing high quality rifle ammunition for hunting and competition shooters all over the world.

The comprehensive range includes a selection of cartridges in every major calibre. Nevertheless, Dynamit Nobel's policy of constant and intensive research has led to the development of special calibres such as 5.6x57, 6.5x68 and 8x68S. Constant attention to detail and painstaking quality control ensures the end result – the finest centre fire ammunition in the world.

Dynamit Nobel offers a comprehensive range of ammunition. Our manufacturing process embodies the very latest in high technology and high efficiency methods. This helps us not only to meet the wide and varied needs of shooters, but to do so at competitive prices.

Every experienced shooter will know that there is no such thing as a 'universal cartridge'. The type of game, the targets resistance, the firing distance, and the particular shooting situation all have an effect on the choice one must make. Clearly a cartridge suitable for deer will not be suitable for shooting big game. It is essential therefore to produce a wide variety of rifle ammunition with differing bullet weights and bullet types in all calibres.

SG Target Bullet

These bullets are specifically designed for competition and hunting target shooting. SG Target Bullets have a proportionately thin tombak-plated steel jacket. The lead core bullet does not extend all the way to the nose of the bullet, resulting in a hollow cavity in the nose area. The outlined rear of the cone has a positive effect on the flight characteristics.

The bullet construction produces an immediate separation on impact, so that there is no deep penetration and the energy is immediately dissipated. The ballistic properties of the bullet are very good, and exceptionally accurate target patterns can be achieved.

The construction of the bullet has enabled us to use modern manufacturing methods and produce an efficient manufacturing programme. The result is that RWS rifle cartridges with target bullets are not only exceptionally accurate, but also attractively priced.

Standard Semi-jacketed Bullet

The Standard Semi-jacketed Bullet is a new product from Dynamit Nobel. The bullet conforms to normal ballistic energy dissipation requirements. The long guiding flank of the tombak-plated steel jacket ensures great accuracy, similar to that achieved with the successful SG-bullets. Ample fragmentation and excellent mushrooming of the remaining body of the bullet ensures a high proportion of one-shot kills. If the hunter's aim is good, the bullet will invariably leave a clean exit.

Some professional shooters hunting both small and medium weight game with their extensive experience hunting under difficult conditions, may wish to continue to use the specialised KS, H-mantle or TIG/TUG bullets that have historically been produced and been made available by Dynamit Nobel.

RWS Bullets – How they work

H-Mantel Bullet

The principal characteristics of the H-case bullet are a constriction in the jacket and division of the lead core. The constricted case – or H groove – causes the bullet to separate on impact, the front portion disintegrating inside the body as the lead splinters, and the strengthened rear portion retaining its cylindrical shape to provide maximum penetration and a calibre size exit hole.

It is this dual function which makes the RWS H-Mantel so effective. As well as the universal type with hollow copper nose, for calibres from 7 mm upwards, an open hollow nose version is also available.

Original Brenneke TIG

In the original Brenneke Torpedo Ideal (TIG) Bullet, the hardened rear core of the bullet has a funnel-shaped recess into which the front lead core fits like a plug. This type of construction favours the mushroom-like deformation of the projectile backwards into the rear part of the bullet and thus produces a very high energy yield in the body of the game. RWS cartridges with Original Brenneke TIG are therefore eminently suitable for both large and small deer and boar.

Soft Point

The soft point round and pointed nose bullets are specifically designed to splinter. Thus penetration is not as great as with some other RWS bullets. For this reason an exit hole is not always guaranteed. But with a suitable choice of calibre and bullet weight, and due attention to range, they offer excellent accuracy and a method of keeping damage to meat within satisfactory limits.

Cone Point

The cone point bullet is the result of exhaustive laboratory and practical studies of aerodynamic behaviour and the subsequent effect on the target. The jacket wall thins towards the bullet nose and thickens in the guiding area. This carefully engineered matching of casing and core produces an even mushrooming together with effective residual power.

Original Brenneke TUG

In the Original Brenneke Torpedo Universal Bullet (TUG), the hard rear core of the bullet projects spherically into a corresponding recess in the front lead core. As a result of this design, there is a reduced tendency to mushroom, and consequently higher penetration power is achieved. RWS cartridges with Original Brenneke TUG are thus mainly designed and suitable for big game.

Full jacket

The full jacket bullet has a closed case towards the point, which is crimped into the base of the projectile. The lead core, which is visible at the base, has a pointed nose for the small calibres, while in the larger calibres, this is round. In addition, the nose of the jacket is strengthened to provide high penetrating power. This type of bullet is used for smaller game where a penetrating shot is required, which expends little energy yield in the body and does little damage to the meat, or for penetrating very heavy and hard game, such as elephants.

.22 Hornet

This, the smallest RWS centre-fire cartridge with rim, owes its strong market position not only to its extreme accuracy but also to its excellent performance and low cost. The RWS load with the 46 grain (3.0 g) target bullet produces accuracy groups of around 20 mm with 10 shots at 100 m. A grouping which will achieve outstanding results.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
.22 Hornet Target bullet	46	3.0	2,430 (740)	1,880 (560)	1,450 (425)	605	360	215

.222 Rem.

This cartridge calibre is remarkable for its phenomenal accuracy. It is a small-bore cartridge and offers all the benefits you would expect. In fact it has long been one of the most widely used bench rest cartridges. It is particularly suitable for reloading and accurate at 200 m with the RWS 3.2 g target bullet. With the right weapons a group of 20 mm with 10 shots at 100 mm is possible. It is inexpensive and yet combines soft recoil with high velocity for easy shooting.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
.222 Rem. Target bullet	50	3.2	3,180 (970)	2,475 (735)	1,910 (555)	1,125	680	405

.243 Win.

For international shooting competitions according to the Hunter's Association rules, this cartridge is specified as the minimum calibre. The special RWS target load with 70 grain (4.5 g) bullet weight and muzzle velocity of 3,280 ft/sec (1000 m/s) is tuned with precision to the demands made of it. The particular design principle of the target bullet with the hollow point contributes towards its outstanding shooting accuracy.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
.243 Win. Target bullet	70	4.5	3,280 (1000)	2,850 (855)	2,455 (725)	1,660	1,255	930

6,5 x 55

This is the former Scandinavian ordnance calibre. Over and above the specified shooting tests for the game licence, one will find many shooters who prefer to use this calibre on their frequent visits to the firing range. The particularly low-recoil RWS load with the 93 grain (6.0 g) target bullet is excellently suited both to the firing range and to preparation for the stalk. Try it yourself, and you will be enthusiastic about its shooting performance.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
6.5 x 55 Target bullet	93	6.0	2,985 (910)	2,465 (735)	2,020 (590)	1,830	1,250	840

RWS Centre Fire Rifle Cartridges

Dynamit Nobel

.270 Win.

This deer calibre found all over the world is also to be found on the world's shooting ranges. The ideal bullet weight of 130 grain (8.4 g) for this cartridge has also been used by DYNAMIT NOBEL for the shooting range. With the inexpensive RWS target bullet, groupings of 30 mm with 10 shots at 100 m are no rarity. Just one more proof of DYNAMIT NOBEL quality.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
270 Win Target bullet	130	8.4	3,165 (965)	2,825 (850)	2,510 (750)	2,885	2,300	1,815

.308 Win.

The RWS loads with the 168 grain (10.9 g) and 190 grain (12.3 g) Match S bullets are specially designed to meet the needs of free-rifle shooters at 300 m. The group from target rifles is no more than 50 mm with 10 shots from 300 m. This outstanding precision is helped by the specially designed bullet shape with the long point and conical tail. The choice between two possible bullet weights enables the marksman to adapt to prevailing wind conditions. The heavier bullet is

less wind-sensitive. The degree of twist and type of barrel also influence the choice of RWS bullet. The Match bullet is of course composed of match-oriented components, e.g. special cases with corresponding wall thickness at the neck. In this way, the pressure required to release the bullet remains constant and the bullet remains concentric. For shorter distances, the load with the target bullet in the pack of 50 is also recommended. This level of accuracy is unusual at this price.

168 grains

190 grains

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)

.30-06

This calibre is in widespread use in the USA and has made its mark in other countries. Originally the US ordnance calibre. Still very popular today for practical rifle shooting because of its great performance potential. Also highly suitable as a training calibre as it is inexpensive when combined with the 147 grain (9.5 g) RWS target bullet load.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
30-06 Target bullet	147	9.5	2,955 (900)	2,600 (780)	2,275 (675)	2,840	2,200	1,685

8 x 57 JS

The 8 x 57 JS is one of the oldest and most widespread European ordnance calibres. It has also been used in those places throughout the world where Mauser weapons are employed. Hence the frequent name 8 mm Mauser. The RWS load with 187 grain (12.1 g) target bullet is highly suitable for practical rifle shooting or for firing from collector's weapons or modified 98's with rifle scopes. The accuracy at 100 m is thoroughly satis-

factory taking into account the condition of the rifle.

Calibre Bullet style	Bullet weight		Velocity ft/sec (m/s)			Energy ft/lbs		
	grains	g	muzzle (V ₀)	100 yds (100 m)	200 yds (200 m)	muzzle (E ₀)	100 yds (100 m)	200 yds (200 m)
8 x 57 JS* Target bullet	187	12.1	2,625 (800)	2,305 (695)	2,015 (600)	2,860	2,200	1,470

RWS SINOXID "BERDAN" primers

Open primers of the "Berdan" type can only be used in a cartridge assembly which contains an anvil against which the firing pin can act. The "Berdan" type cartridge contains two ignition channels and had been used for most European rifle ammunition. Today however only small numbers of military rifles and pistols are fitted with "Berdan" primers.

Primer no.	ø mm	Name	Packaging	Pieces	Recommendation

6504	6,45	large rifle	envelope	150	.577 Snider, 11,15 x 58 R, .43 Egyptian etc.

RWS SINOXID percussion caps for muzzle loading

RWS percussion caps for muzzle loaders are available with or without top hats. The priming compound is covered in foil and protected by varnish. The caps are mounted on the nipple of the appropriate muzzle loading weapon and the black powder is ignited through a vent in the breech.

Primer no.	ø mm	Type	Packaging	Pieces	Recommendation
1055	4,45	ribbed	round box	100	muzzle loader
1075	4,47	ribbed	round box	100	muzzle loader
1081	6,12	4-flanges	round box	250	muzzle loader

Metal cases

GECO pistol and revolver cartridge cases

All the cases in the GECO range come with a centre hole for anvil primers. This is significant because the original ammunition featured two ignition vents for "Berdan" primers. Reloading with the "Berdan" primer is a time consuming business requiring special tools and thus the GECO range offers advantages to competitors reloading on the shooting stand.

With the exception of 6.35 mm calibre, GECO cases come packaged in 50's with lattice-type inserts. Recommended primers are printed on the back of each pack.

RWS rifle cartridge cases

RWS unprimed rifle cartridge cases are ideally suited to handloading. They are made from high quality MS 72 material and are designed with a centre hole to receive anvil primers.

RWS Air rifle pellets

RWS Standard are manufactured to fine tolerances and are suitable for a wider range of air weapons. In their classic rifled form they offer the marksman the performance he has come to expect from RWS.

RWS Hobby An enviable balance of price and quality, used by the million world-wide, not only by budding champions but also by those who just shoot for fun.

RWS Superpoint Although comparatively new to the RWS Programme, Superpoint have already established a name for accuracy, penetration and excellent flight stability. Their stopping power against small pests is well known.

RWS Super Hollow Point. New designed pellet with hollow point. Good penetration and quick opening of the pellet head. Ideal for pest control shooting.

Superdome is the latest addition to the RWS range. It is a bulldog (roundheaded) pellet which has the same high quality, accuracy, and other characteristics as all RWS pellets. Ideal for both target practice and general use.

RWS Round Pellets for air guns are precision-made from coated lead rod by means of the press and polish method. Also available copper-plated. They are a preferred pellet for repeating rifles and 4 mm rimfire smooth bore weapons.

Flobert Cartridges

Flobert ammunition is named after the French gunsmith M. Flobert, who was the true inventor of the rim fire principle. Originally Flobert ammunition was by definition a cartridge where the priming and propellant charges were one and the same. More recently, rimfire cartridges, small shot cartridges and Flobert cartridges supporting a round-nose bullet were developed to contain a small additional amount of powder as a supplementary propellant charge, thus enabling a more effective cartridge to be produced. These are the cartridges in use today.

Flobert starting blanks are intended for use with starting and signal pistols. They emit a sharp loud bang of approx. 100 decibels. This effect is achieved by using carefully selected material, the fluted pattern of the case and by the Sinoxid priming compound.

Flobert bulletted cartridges in 6 mm and 9 mm calibres with pointed or round-nose bullets, primarily intended for pest control. In spite of the small ignition charge the cartridges maintain an accurate flight path. These cartridges are mainly fired from smooth barreled guns.

Accuracy is ensured up to distances of 15 metres.

Flobert Small shot cartridges in 9 mm calibres are available with a double charge and can be fired from smooth or rifled barrels.

The soft lead shot with a diameter of approximately 1.9 mm does no damage to rifling. These cartridges are particularly suited to pest control.

Following the 'Flobert' principle, the **Rand-zunder** of 4 mm diameter is the smallest rimfire calibre cartridge available. They have a case length of 6.6 mm or 8.5 mm. They can be obtained without bullets but standard practice is to load with a no. 7 bullet.

They can also be loaded with a bullet of larger diameter.

Practise Ammunition 4 mm M 20 were originally developed for training purposes. By using a 4 mm adaptor, shotguns, centre fire rifles and even full bore pistols and revolvers can be used to fire Pistol M 20. The 4 mm adaptor is a steel dummy cartridge chambered to fit the mother gun, and itself chambered to accept the 4 mm M 20.

RWS Centre fire Blanks are manufactured for starting revolvers.

They contain black powder and produce a loud report.

Officials of athletics and other sporting events find that as there is smoke visible together with the sound of the report, the timing of the event can also be measured visually.

Centre fire blanks are also used in dog training, to enable the animals to become accustomed to gunfire.

To a certain extent, they are also suitable for self defence, since the noise itself is often a sufficient deterrent to a potential attacker.

New to the range is the .38 S & W centre fire blank. This blank cartridge can be fired from

any handgun cal. .38 S & W.

RWS-Range:

4 mm short	6 mm round nose
4 mm long, without bullet	6 mm pointed
4 mm long, with bullet	9 mm round/pointed
4 mm, M 20	9 mm double charge
6 mm blank, 100 s	7 mm blank
6 mm blank, 50 s	9 mm blank
	.38 S & W Blank

RWS Blank ammunition

RWS Centrefire blank ammunition is designed for use in starting revolvers. The blanks are loaded with black powder and emit a sharp loud bang. They are particularly suited to sports events where the smoke is seen fractionally before the report is heard, and this assists competitors to get away quickly without beating the gun. The centrefire blanks are also used for dog training (thus providing the atmosphere of the shoot and helping dogs to overcome gun shyness). To a lesser extent the ammunition has an application in self defence as the noise is often sufficient to rout the assailant. The .38 S&W calibre is particularly popular. .38 S&W blanks can be used to ensure faultless performance for rapid firing.

Flobert 6 mm ammunition
Flobert 6 mm cartridges are designed for use with starting and signal pistols, they emit a sharp loud bang. The effect is achieved by using carefully selected materials, and by the fluted pattern of the case and the special composition of the sinoxid primer compound. These cartridges can also be used for signal pyrotechnics.

Alarm cartridges

Alarm cartridges are available for shotguns and for alarm shooting apparatus in both 12 g and 16 g. They are loaded with black powder. They can be used for home security in the grounds of your house with an automatic release system. They are frequently used for echo sounding measurements in specialised equipment. However, the majority of these cartridges are sold for arranging open air stage performances and similar theatrical events. As well as the report, there is also a decorative display of smoke from the black powder, which has a particularly dramatic visual effect. Due to the deliberate omission of the wad in this blank cartridge design, there is a small residue left in the weapon. It is therefore recommended that the barrels be cleaned after use.

Depyfag Pyrotechnic ammunition

15 mm signal stars are used in conjunction with blank cartridges for shooting from starting pistols and revolvers. 6 mm weapons are the most suitable for this purpose and create the best effect.

The stars are shot to a height of 25 metres. Each box contains a 10 signal stars, four red and two each of green, yellow and silver. There are various pyrotechnic cartridges available which are suitable for use in 6 mm revolvers.

15 mm Stern mit Pfiff with 10 whistling rockets. The firework whistles during ascent and finally unfolds at the peak of its trajectory to a single star which changes colour several times.

Yet another combination is the 15 mm silver star, first a silver trail is visible and finally a star which changes its colour.

Especially effective is the 15 mm Multi-Star. Here, too, a silver trail is visible at first, followed by a boquet of multi-coloured stars.

Rocket launchers are specially designed for use in vineyards and similar establishments, where they are used as bird scaring devices. Rocket launchers are only supplied to holders of recognised permits.

Firework cartridges are manufactured in 12 g and 16 g. They can be fired from shotguns in these calibres. Built into the cartridge is a pyrotechnics component. These fan out on launching and create a very attractive boquet.

RWS scopes and ROTTWEIL binoculars

are produced from the best quality materials available and manufactured under stringent quality controls. The result is a clear, bright image from a precision made instrument. Their manufacture, reliability and design are a testimony to the high standards one has the right to expect from such top line products. The optics of all RWS scopes and ROTTWEIL binoculars are therefore fully coated, including not only the external object lens and the eye piece, but all internal and external parts involving the transmission of light.

Handguns (other than blankguns) are sold through the trade ONLY!
Please see your local dealer!!

There are two basic differences between the MTR model and revolvers of conventional design:

- 1) The cylinder is located in front of the trigger guard;
- 2) A speed type loader magazine contains the cartridges and goes with them into the cylinder.

The first feature gives rise to the following important consequences:

- A) **The muzzle jump of the weapon firing is eliminated.** - Muzzle jump is a component of recoil force generated by the distance between the resistance point of the hand on the grip and the direction of the recoil force, which, practically speaking, is coincident with bore axis.
As in our case the bore axis is very low, it is possible to shoot all the rounds in rapid fire maintaining the alignment on target. This is a fundamental advantage in many shooting conditions.
- B) **Large-capacity cylinders can be used.** - In conventional revolvers, a large cylinder located above the trigger, apart from making the weapon unsightly, would maximize the muzzle jump as said above at A. On the contrary, lowering the cylinder location aids control of the weapon upon firing.
- C) The grip of a conventional revolver, the shape of which is a necessary consequence of its structure, can not offer the hand an uniform grasp. In the MTR model the grip is not impaired by mechanical reasons and the grip outline was settled only in order to give an instinctive pointing ability.

The second feature, that is to say the use of a quick-to load and foolproof magazine, speaks for itself. It simply removes the historical handicap of the revolver as compared with automatic pistols.

SAUER 200

Combining Technology and Tradition

SAUER 

A remarkable Combination of Features in a Single Rifle

SAUER 200. An exceptional firearm. The modular concept, the design principle of direct bolt to barrel lock-up, the two piece stock, and the free floating barrel. Features which have long been recognized as practical and logical, but have not been applied fully because of previous design and manufacturing problems. The ability to incorporate all these advantages in one rifle was only made possible by combining state-of-the-art production processes with the engineering and gunsmithing expertise of SAUER. SAUER 200. A hunting rifle which upholds the SAUER tradition. Ahead of its time in accuracy, style, safety, and handling characteristics.

Smooth bolt action

The bolt body and locking lugs have the same diameter. Smoothness of operation

has been optimized in both the steel and the high strength, light-alloy receiver by surface hardening.

Easy disassembly

Any hunter who travels frequently will appreciate this feature. A few turns of the take-down key and your SAUER 200 is dismantled for transportation in a practical short carrying case. The take-down key is supplied as standard.

Trigger assembly unit

Crisp conventional trigger with 1.5 kg (3.3 lbs.) trigger pull conforms to the standards required for international competition. The single set trigger (shown on receiver above) is available as an option. Both trigger units incorporate a convenient safety which acts on the trigger, the sear, and the firing pin. It also blocks the bolt against unintentional opening. The safety cannot be moved to "OFF" if the set trigger is in its cocked position.

Magazine catch

Flush to prevent accidental release, but easy to operate, even with gloves on. The clip will not fall out with recoil due to the unique design of the catch mechanism.

SAUER 

SPORTING FIREARMS

by
Friedrich Wilh. Heym, GmbH.
Muennerstadt West Germany

For many years, the art of producing sporting firearms which combine superb accuracy with elegance and beauty, was synonymous with the name "Suhl". This East German town in the mountains of Thuringia was the home of most German gunmakers up to 1945.

Thus it was in Suhl that Friedrich Wilh. Heym founded his gun factory in 1865. His ambition then was to be counted among the best in the trade. Today our ambition is the same.

The name HEYM became well

known in 1891, when the company obtained a patent for the very first "Hammerless Drilling". The production of Shotguns, Combination Guns and Drillings (three barrel guns) contributed to rapid growth. The founder's son, Adolf Heym, took charge of the factory in 1912 and was responsible for its survival through World War I. August Heym succeeded him in 1920, and the company began producing a much more complete selection of sporting guns. The first "Anson & Deeley" Drilling was made by HEYM. Double Rifle Drillings and Double Rifles were added. Other milestones in gun development at HEYM were Drillings with a separate rifle cocking device on the top tang and those with three triggers. HEYM firearms achieved a world-wide reputation for excellence.

SPECIAL FOLDER!

We Don't Leave Making HEYM Firearms to Other Manufacturers.

It may be old-fashioned – but with very few exceptions all HEYM Firearms are completely made at our factory. This may be the reason why they are well known for dependability and accuracy. Furthermore: how else could we give you a long term guarantee without having total control over the making? Where we use main-parts of other makers we will

explain how you benefit by our choice.

"The Barrels Shoot"

We start with the best "Krupp Special  Barrel Steel" – famous all over the world (Picture 1). The most modern equipment, know-how and skilled technicians transform the raw blank into a fine HEYM barrel. Boring, honing and cold hammerforging are part of this process (Picture 2 and 3). Our cold forging machine incorporates the latest "state of the art" (Pic-

ture 4). Under 130 tons of pressure the smooth bore of the barrel blank is converted to lands

and groves of exact diameter and twist. The barrels are turned to the required contour on a modern CNC lathe (Picture 5) and the chambers are reamed to exact tolerances. Shotgun barrels are given the desired choking at the muzzle. All barrels have to pass strict quality control inspections at various stages (Picture 6).

Now the Skilled Barrelmaker Takes Over.

Through the use of spacer

"The Actions Last"

High quality, corrosion resistant steel is the foundation of our strong actions. Only on our Model 22 S where a weight reduction is of special importance will we use duraluminum. We do not cast or forge. Except on Model 33 we machine the actions from a solid block of steel (Picture 8). Most of the small parts of our guns are machined the same way (Picture 9).

**We Make it - We Control it -
We Have no Excuses.**

blocks the barrels are carefully aligned with each other. After

ribs and ramp are closely fitted, all components are soldered together (Picture 7). Protruding wedges at the muzzle allow for final regulation. It takes years to achieve the skill which assures the accuracy of a HEYM Double Rifle or Combination Gun.

This is part of the philosophy which made us successful. And as our customers, dealers and gunsmiths assure us that we are on the right track - you may depend on HEYM Quality also for the years to come.

HEYM BOLT ACTION RIFLE MODEL SR 20

for right and left hand shooters.

- Barrel:** Made from special rust-resistant Krupp barrel steel, cold hammered for outstanding accuracy. Lengths: 21 inches in carbine; 24 inches in standard rifle; 26 inches in magnums.
- Sights:** Adjustable V-type rear sight and front sight.
- Action:** Dependable Mauser-type with two large locking lugs and a dependable clawtype extractor. Left hand action on request. The bolt can be stripped and reassembled without tools. The Single Trigger is fully externally adjustable. Double Set Trigger or Single Set Trigger on request.
- Safety:** Lateral sliding type with three positions. Positive, ideal for low mounted scopes.
- Magazine:** Staggered box type with hinged floor plate. Capacity: 5 standard or 3 magnum rounds.
- Receiver:** Tapped for U. S. mounts and bases.
- Stock:** Made of fine European walnut, oil finished, hand checkered, rosewood grip cap and forearm tip, schnabel forend. Tasteful Monte Carlo cheek piece. The carbine version is stocked to the muzzle.
- Calibers:** .243, .270, .308, .30-06, 7mm Remington magnum, .300 Winchester magnum, .375 Holland and Holland, plus 7 x 57, 7 x 64, 8 x 68 and other European calibers.
- Weights:** standard rifle 7 1/4 pounds; magnum rifle 8 pounds; carbine 7 1/2 pounds.

A varmint version of the above rifle is available in .222, .223. The varmint rifle is called the Model SR 40 and features a short action and a 22-inch barrel. With European walnut stock - standard version. The weight is 6 3/4 pounds.

Heym SR20 Classic Rifle

for right and left hand shooters.

Calibers: Standard - 5, 6x57, 6, 5x55 SM, 6, 5x57, 7x57, 7x64
9, 3x62, .243 Win., .270 Win., .308 Win., .30-06
Magnum - 6, 5x68, 8x68 S, 7mm Rem. Mag.,
.300 Win. Mag., .375 H&H Mag.

Action:

- Mauser Type Locking Lugs
- Choice of Adjustable Trigger or Single Set-Trigger
- ALL STEEL BOTTOM METAL with hinged floor plate and inside release.
- Smooth Bolt Travel
- Three Position Side Safety

Barrel: Made by Heym from best quality Krupp Barrel Steel.
Length: Standard Calibers 24'', Magnum Calibers 25''.

Magazine: Staggered box type with hinged floor plate.
Capacity: 5 standard or 3 magnum rounds.

Stock:

- French Walnut
- Hand Checkering
- Pachmayr Old English Pad
- Q.D. Swivels
- Steel Recoil Shoulder on Magnum Calibers
- Classic Design with cheekpiece
- Oil Finish
- Steel Grip Cap
- Rosewood For-end Tip

Weight: Regular Sporter - about 7 lbs. 10 oz.
Magnum Sporter - about 8 lbs.

Sights: Basic rifle comes without sights. With sights, if desired.

Mounts: The EAW Quick Detachable Pivot Mount is available for HEYM SR 20 Actions.

HEYM - THE NAME SYNONYMOUS WITH ACCURACY,
DEPENDABILITY AND FINE CRAFTSMANSHIP.

Rottweil

72 O/U Shotguns

During the introduction period of the ROTTWEIL '72 shotgun we related to the Olympic Games 1972 in Munich where the Gold-Medal-Winner in Skeet has shot with an identical shotgun construction. This outstanding success did not remain the only one but meanwhile also World-, European-, German- and other important international championships in clay target shooting have been won with our ROTTWEIL '72 o/u shotguns; model Skeet Olympia and Trap Montreal.

This record of success proves that the experience gained in the past from hunting and sport shooting is a vital factor for the design and construction of a superb shotgun.

Today's high standard in technique and precision machines provides the prerequisites for a superior product, therefore, granting the interchangeability of stocks, barrels, trigger groups and parts with very little refitting work, the significant advantage to assemble within no time stocks, barrels, trigger units, etc. of the manufacturer's program according to the shooter's individual liking or requirement. The interchangeability appearing to be an unsolvable desire therewith has been put into reality.

Please study the options available for our ROTTWEIL '72 o/u shotgun in this brochure. You will be surprised about the multiple variety.

Frame and Receiver

The rugged receiver is milled from a solid block of special gunsteel. The compact and sturdy frame guarantees extraordinary strength, rigidity and dimensional stability. The change of stocks can be accomplished without further refitting work. Perfect and uniform functioning of the trigger group is secured. The chromiumplated and sandblasted surface of the receiver prevents corrosion and reflection.

Safety

Conventional slide safety at top tang – deactivating trigger.

Action

Patented rebounding locks of latest technical development, i.e. the spring mounted firing pins retract automatically after firing into its original position hence swift and easy operation of the shotgun. Both firing pins are of identical dimensions and are fully interchangeable. The trigger group removed by hand to facilitate cleaning and replacement by another type of trigger group. The unbreakable coil springs are guided in telescopic steel sleeves.

Breech

Broad and slanted low head locking wedge, slanted receptacle at barrel root, two concealed locking lugs. The top lever is locked in its right hand position once the shotgun is opened.

General data

Type: O/U-double-barrel shotgun

Loading: Drop-barrel system – single loader (inserting always one cartridge)

Cocking mechanism: Self-cocking, cocking of striking pieces effected by cocking levers automatically already during breaking of barrels

Barrel locking mechanism: Breech in single-bloc construction with solid joint between catch section and trigger plate, double barrel hook locking mechanism, top lever

Action: Anson & Deeley (hammerless), modified

Bunch of barrels: Monobloc-joint with hard silver solder, barrels – cold-hammered, rib and rail – joined with soft solder

Bore: 12/70

Safety device: Combined trigger and striker catch safety with safety slide on the stock neck

Charge exploding: Indirect action striker pin Cartridge case removal: Automatic spiral spring ejector, GM-type

Sighting device: Sighting rib with muzzle end bead fore-sight

Gun-stock: Pistol grip type, castoff: above = 7 mm, below = 10 mm, bolting in longitudinal axis

Fore-end: One-piece, with snap lock

Suhl-made hunting and sporting guns

Over-and-under guns

Over-and-under guns have been made at Suhl with the trade mark

Gebr. Merkel, Suhl

since 1898. They were the first hunting guns with barrels arranged one above the other and, light and easy to handle, they have since proved to be able competitors of the side-by-side gun. Word of the ease of handling, balance and elegance of this new gun type soon spread in hunting circles, particularly since **MERKEL** over-and-unders were characterized by outstanding standards of craftsmanship. The superior accuracy of the barrels used for over-and-under combination guns and double rifles was nothing short of amazing and helped many a lucky **MERKEL** owner to an unexpectedly rich bag. It is scarcely astonishing that ever since they appeared there has been a constant demand for **MERKEL** over-and-unders that shows no sign of abating.

The appearance of clay pigeon shooting provided a new field in which **MERKEL** over-and-under guns could demonstrate their outstanding handling characteristics and accuracy. First successes were booked as early as the end of the nineteen-twenties, and since then there has been scarcely a major international shooting event without successful participants using **MERKEL** guns. In 1928 and 1929 the German championships and in 1930 and 1931 the world championships were won with **MERKEL** over-and-unders, and the series of triumphs has since continued without interruption.

MERKEL guns reached the height of international acclaim when they were awarded the Grand Prix at the World Exhibition in Paris in 1937.

But **MERKEL** over-and-unders have been a triumphal success not only for their creators. In the course of their eighty-year history they were also the cause of a revolutionary upheaval in gun design.

As time went by most gunmakers came to realize that future success could lie only in the production of over-and-unders because their advantages compared with the side-by-side were indisputable:

- the high, narrow fore-end protects the shooter's hand from the barrel both when cold and when hot from shooting,
- the fore-end is narrow and therefore lies snugly in the hand to permit easy and positive swinging when following a target,
- the slim barrel line gives a virtually unobstructed field of view and thus permits rapid aiming and shooting,
- the rib is situated well above the barrels and is instantly visible above the frame,
- the over-and-under barrel arrangement reduces recoil error; the recoil merely pushes the muzzle up vertically, and muzzle deflection when the bottom barrel is fired is minimal,
- the sides of the frame are large and permit attractive ornamental engraving,
- due to its sturdy construction the vertical barrel arrangement is eminently suitable for rifled barrels (double rifles or combination guns).

Successes with **MERKEL** over-and-under double-barrel guns

Over-and-under double shotguns for clay pigeon shooting

Specification

These models are basically the same as the 200 E but differ in the following respects:

Gauge:

only 12/70 gauge

Barrel length:

680 mm

Patterning:

skeet bored: both barrels about 70% hits at 20 m range

Rib:

ventilated and tapered rib (from 9 mm to 7 mm at muzzle), with continuous solid foot

Action:

"Blitz" system with helical main springs and single non-selective trigger (model 61).

Stock:

special skeet stock with pistol grip and hogsback comb

Fore-end:

special skeet fore-end with ventilated ledges and take-down part

Fittings:

without sling swivels

Weight:

ca. 3.3 kg

Specific differences:

Engraving:

- model 200 ES:
- model 201 ES:

as 200 E but on grey metal frame and side plates
flowers on grey metal frame and side plates

Skeet

Model 200 ES

Model 201 ES

"Blitz" action
with helical main springs
Models 200 ES and 201 ES

Over-and-under double shotguns for clay pigeon shooting

Specification

The **basic construction** is the same as that of models 200 E, 203 E and 303 E, but there are the following differences:

Gauge:

only 12/70 gauge

Barrel length:

760 mm

Patterning:

both barrels full choke (cf. Table I for percentage hits)

Rib:

tapered ventilated rib (from 9 mm to 7 mm at muzzle) with continuous solid foot

Stock:

special trap stock with pistol grip and sporting cheekpiece, drop at comb 38 mm, drop at heel 45 mm, cast off/cast in 5/8 mm, pull 365 mm, rubber recoil pad

Fore-end:

special trap design, 300 mm long, ledges and take-down part ventilated

Equipment:

without sling swivels

Trigger:

single trigger, non-selective

Model 200 ET:

engraving as for the 200 E but on grey frame and side plates, "Blitz" action with helical main springs as for skeet models 200 ES and 201 ES (cf. figures above)

Side lock of models 203 ET and 303 ET with helical main springs

Blaser CO₂ CONVERSION KIT

Convert your favourite
Colt GVT into a
.177 Match Air Pistol

Price at Present
\$ 189.95

**For Colt Design Government Model
Automatic Pistols**

A new CO₂ powered .177 cal. conversion unit from BLASER for your COLT GVT .45 auto pattern pistol including the new series 80 model.

The BLASER conversion unit can be installed with no fitting required and can be removed and replaced without losing any propellant, duplicating the weight of the slide it replaces and keeping the same feel and balance. Inexpensive to operate, approx. 100 shots per CO₂ cartridge without loss of pressure. Enables the .45 auto owner to practice almost anywhere using the frame of his favourite competition gun.

Ambidextrous operation, sliding pellet loading block can be reversed for left hand operation.

The conversion unit is fired by the hammer striking a metering valve which releases a precise amount of gas into the rear of the breech block propelling the pellet down the bore.

(See shooter's insight - GUNS AND AMMO, Febr. 1986 for Ross Seyfried's opinion of the conversion.)

Quote: "What I was after was a way to shoot my COLT .45s in my living room, and the way to do it wasn't with an extra heavy duty set of earmuffs. During my years of serious training, dry firing was as close as I could get to indoor practice. The problem was that when I dry fired I never missed and misses are the greatest teachers."

Technical Data:

Caliber:	.177 air gun pellets
CO ₂ Cartridge:	Crossman CO ₂ powerlets or any similar CO ₂ cartridge - approx. 100 shots per cartridge without loss of pressure.
Barrel:	5 3/4", special forged steel barrel, match grade, 12 grooves.
Muzzle velocity:	approx. 360 f.p.s.
Pellet trajectory:	if sighted in at 5 1/2 yards the pellet impact will be 1/2" high at 11 yards and 3" low at 25 yards.
Weight:	1 3/4 lbs.
Length:	7 3/4 inches.
Sights:	front partridge type, rear square notch fully adjustable for windage and elevation.

Machine rest accuracy: 5 shots at 11 yards produced a 1/10" group.

Dear Customer:

If your local dealer cannot supply you with the products in this catalogue, send your original FAC if applicable and certified cheque or money order, and we will send the merchandise to you!

Please include \$ 8.00 for a firearm
 \$ 4.00 for accessories
 \$ 7.00 for small orders of ammunition
 \$11.00 per case of ammunition

for handling, packing, shipping & insurance.

Since all the items you want out of this catalogue are imported from somewhere, we beg your understanding that at times we cannot deliver immediately. We depend on out of the country manufacturers, delays from shipping companies, customs clearance, etc. You may rest assured, however, we do our very best to serve you.

Please - to make correct shipments, **ALWAYS PRINT CLEARLY** your name and address, proper name/number of item, size, caliber or gauge, colour, etc.

Prices, terms and specifications are subject to change **WITHOUT** notice!

Ontario residents please add ORST 7% on to the entire amount; value + shipping + ORST.

SPECIAL RETURN MERCHANDISE NOTE

If for any reason you return merchandise for exchange or refund, it **MUST** be returned in the original factory box, and wrapped in paper to keep it clean and unmarked. Only merchandise in original unmarked condition will be accepted for refund or exchange. Enclose invoice and letter with parcel.

Any damaged shipments **MUST** be referred to carrier immediately. We will **NOT** accept the return of damaged shipments unless carrier has examined!

MERCHANDISE MUST BE RETURNED WITHIN 15 DAYS OF RECEIPT FOR REFUND OR EXCHANGE

GARANTIE LIMITÉE

INTERNATIONAL IMPORTS FOR COMPETITIVE SHOOTING EQUIPMENT INC. (IICSE INC.) garantit à l'acheteur au détail d'origine pendant une période d'un (1) an à compter de la date d'achat que chaque arme à feu vendue par nous sera exempte de défaut de matières premières et de fabrication. Notre obligation en vertu de cette garantie sera limitée au remplacement et à la réparation de toute arme à feu ou de ses parties quelconques qui nous auront été retournées (en port payé) et auxquelles un défaut de matières premières ou de fabrication aura été constaté. Ce service sera fourni gratuitement en ce qui concerne les pièces et la main-d'oeuvre se rapportant aux revendications en vertu de la garantie qui sont conformes aux exigences, y compris l'avis exigé, de cette garantie.

Pour que l'acheteur d'origine se prévale de la protection offerte par cette garantie, il doit aviser IICSE INC. du défaut de matières premières et/ou de fabrication. Ledit avis doit nous parvenir au plus tard un mois après que l'acheteur ait découvert le défaut et, en tout cas, au plus tard un (1) an suivant la date d'achat. Après avoir reçu un tel avis, IICSE INC. enverra à l'acheteur des instructions visant l'envoi de l'arme à feu.

Cette garantie limitée est la seule garantie explicite offerte par IICSE INC. n'offre aucune autre garantie explicite, que ce soit dans le manuel d'instructions, dans les annonces ou ailleurs.

La durée de la garantie implicite, y compris toute garantie de valeur marchande ou d'aptitude des marchandises à satisfaire certaines fins particulières, sera limitée à une période d'un (1) an à compter de la date d'achat.

LIMITE DE RESPONSABILITÉ

LES PISTOLETS, REVOLVERS, CARABINES, FUSILS, PISTOLETS À AIR ET CARABINES À AIR sont classés comme étant des armes à feu ou des ARMES et ils sont vendus par nous à la condition expresse que nous ne soyons aucunement tenus responsables de leur manipulation ou vente sécuritaire en vertu des lois et des règlements régionaux. IICSE INC. ne sera pas responsable de quelque façon que ce soit du mauvais fonctionnement de l'arme à feu, des blessures ou des dommages matériels découlant en tout ou en partie de ce qui suit:

- 1 - Déchargement intentionnel ou négligent,
- 2 - Manipulation incorrecte ou imprudente,
- 3 - Modifications non autorisées,
- 4 - Munitions non standard, défectueuses, incorrectes, rechargées ou chargées à la main,
- 5 - Corrosion,
- 6 - Négligence ou
- 7 - Autres influences échappant à notre volonté directe et immédiate.

Cette limite est valide, que la responsabilité soit revendiquée ou non en vertu d'un contrat, de la négligence ou d'une obligation exacte (y compris tout défaut d'avertissement).

IICSE INC. décline toute responsabilité à l'égard des dommages fortuits ou indirects, tels qu'une perte d'utilisation d'un bien, une perte commerciale ou une perte de revenu ou de bénéfices en vertu d'un contrat, de la négligence ou d'une obligation exacte.

AVERTISSEMENT:

L'utilisation de munitions rechargées, chargées à la main ou non standard annule les garanties. Et les munitions rechargées incorrectement ou chargées à la main et les autres munitions non standard peuvent être très dangereuses, endommager l'arme à feu et causer des blessures graves au tireur ou à d'autres personnes. Utilisez seulement des munitions originales fabriquées à l'usine et de haute qualité qui sont en bon état et du genre et du calibre pour lesquels votre arme à feu a été conçue.

RENSEIGNEMENTS SUPPLÉMENTAIRES:

IICSE INC. se réserve le droit d'apporter des changements en tout temps, sans avis à la conception et aux caractéristiques des armes à feu, d'ajouter et d'enlever des accessoires et d'ajouter ou d'abandonner des modèles sans aucune obligation de sa part.

LIMITED WARRANTY

INTERNATIONAL IMPORTS FOR COMPETITIVE SHOOTING EQUIPMENT INC., herein after called IICSE INC. warrants to the original retail purchaser for a period of one (1) year from date of purchase that each firearm sold by us will be free from defects in materials and workmanship. Our obligation under this warranty shall be limited to replacing or repairing any firearm or part thereof returned (prepaid) to us and found to be defective in either material or workmanship. This service will be provided free of any charge from parts or labor in connection with warranty claims meeting the requirements, including the notice requirement, of this warranty.

In order for the original purchaser to avail himself of the protection of this warranty, he must give IICSE INC. notice of the defect in materials and/or workmanship which notice must be received by us within one month after discovery by purchaser of the defect, and in any event within one (1) year from date of purchase. After such notice is received, IICSE INC. will send the purchaser instructions for shipment of the firearm.

This limited warranty is the only express warranty made by IICSE INC. makes no other express warranty, whether in the instruction manual, advertising or elsewhere.

The duration of any implied warranty, including any warranty of merchantability or fitness for a particular purpose, shall also be limited to a period of one (1) year from date of purchase.

LIMITATION OF LIABILITY:

PISTOLS, REVOLVERS, RIFLES, AIR RIFLES, AIR PISTOLS AND SHOTGUNS are classified as firearms or WEAPONS and are sold by us with the specific understanding that we are not responsible in any manner whatsoever for their safe handling or resale under local laws and regulations. IICSE INC. shall not be responsible in any manner whatsoever for malfunctioning of the firearm, for physical injury or for property damage resulting in whole or in part from:

- 1 - Intentional or negligent discharge,
- 2 - Improper or careless handling,
- 3 - Unauthorized modifications,
- 4 - Defective, improper, reloaded, handloaded, or non-standard ammunition,
- 5 - Corrosion,
- 6 - Neglect or
- 7 - Other influences beyond our direct and immediate control.

This limitation applies regardless of whether liability is asserted on the basis of contract, negligence or strict liability (including any failure to warn).

Under no circumstances shall IICSE INC. be liable, whether in contract, negligence or strict liability, for incidental or consequential damages, such as loss of use of property, commercial loss and loss of earnings or profits.

WARNING:

Use of reloaded, handloaded, or other non-standard ammunition voids all warranties. Improperly reloaded or handloaded ammunition or other non-standard ammunition can be very dangerous, damage the firearm, and cause serious injury to the shooter or to others. Use only high-quality, original factory-manufactured ammunition in good condition and of the type and caliber for which your firearm was designed.

FURTHER INFORMATION:

IICSE INC. reserves the right to make changes at any time, without notice, in the design or specification of firearms, to add or remove accessories and to add or discontinue models without incurring obligation.
